AMENDMENT(S) TO THE CLAIMS

1. (Amended) An archery bow, comprising:

a riser;

15

a pair of flexible limbs extending oppositely from said riser, each said limb having a distal end;

an arrow rest mounted to said riser and defining a trajectory path for an arrow, said arrow rest including:

an arrow rest platform;

a first sear associated with said arrow rest platform;

a second sear selectively engageable with said first sear, and automatically disengageable with said first sear upon application of an impulse in a direction generally parallel to said trajectory path[.];

a spring for biasing said first sear and said second sear to an engaged position, said arrow rest platform being in a raised support position when said first sear and said second sear are in the engaged position; and

a pendulum arm with a distal end carrying said second sear, and wherein said spring is connected at one end with said pendulum arm and at an other end with said first sear.

- 2. The archery bow of claim 1, including an actuator which disengages said second sear from said first sear upon application of said impulse.
- 3. The archery bow of claim 2, wherein said actuator comprises one of a rotary actuator and a linear actuator.
- 4. The archery bow of claim 2, wherein said actuator comprises a rotary actuator including a pendulum arm with a distal end carrying said second sear.

- 5. (Cancelled)
- 6. (Cancelled)
- 7. (Cancelled)
- 8. An arrow rest platform for use with an archery bow, comprising:
- an arrow rest platform defining a trajectory path for an arrow;
- a first sear associated with said arrow rest platform;
- a second sear selectively engageable with said first sear, and automatically disengageable
 with said first sear upon application of an impulse in a direction generally parallel to said
 trajectory path;

a spring for biasing said first sear and said second sear to an engaged position, said arrow rest platform being in a raised support position when said first sear and said second sear are in the engaged position; and

- a pendulum arm with a distal end carrying said second sear, and wherein said spring is connected at one end with said pendulum arm and at an other end with said first sear.
- 9. The arrow rest of claim 8, including an actuator which disengages said second sear from said first sear upon application of said impulse.
- 10. The arrow rest of claim 9, wherein said actuator comprises one of a rotary actuator and a linear actuator.
- 11. The arrow rest of claim 9, wherein said actuator comprises a rotary actuator including a pendulum arm with a distal end carrying said second sear.
 - 12. (Cancelled)
 - 13. (Cancelled)
 - 14. (Cancelled)
